

LW&W Exp. (4)

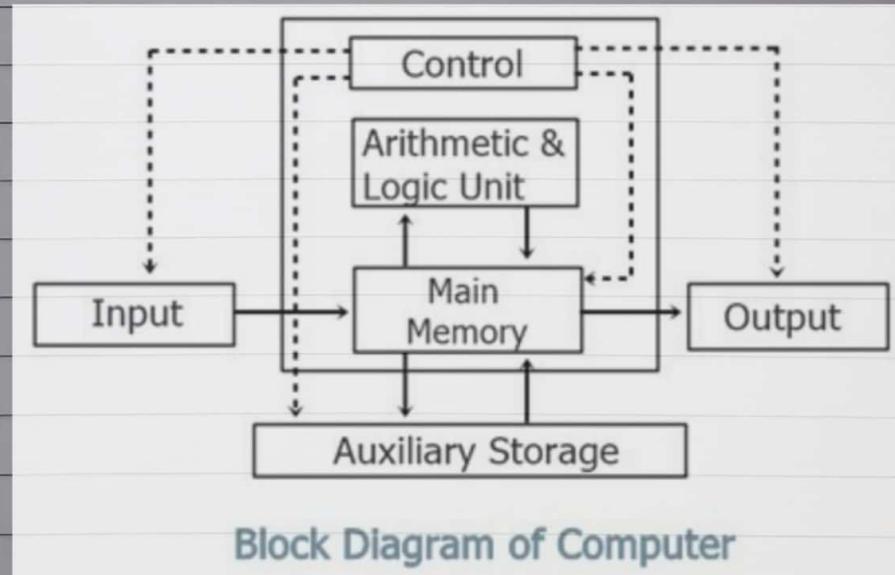

Aim - To study about various computer hardware.

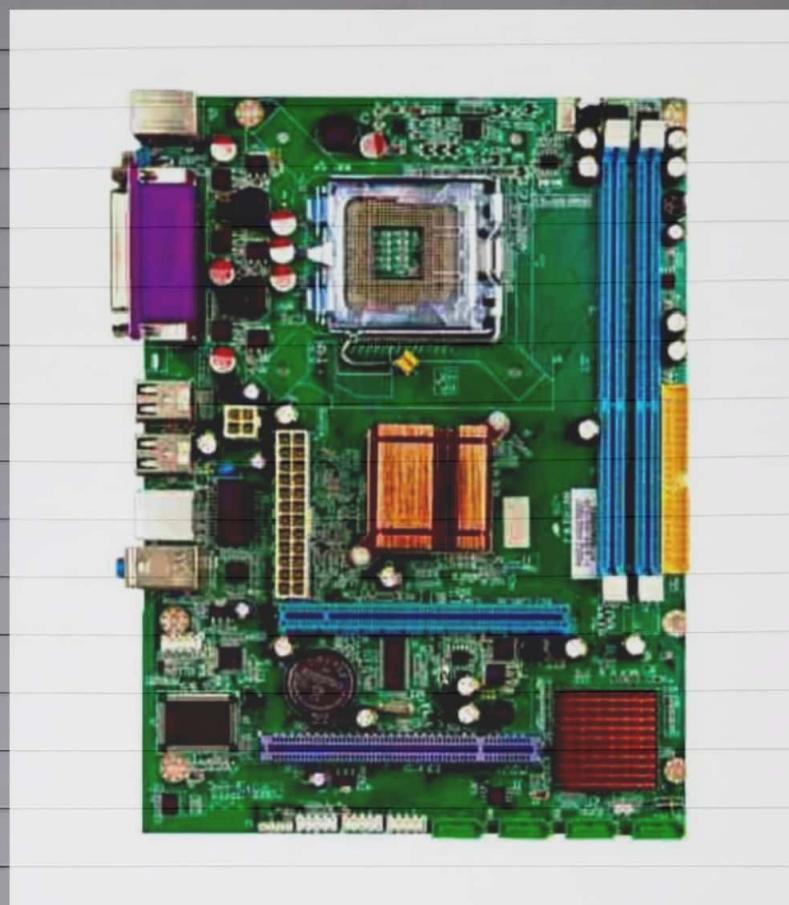

Apparatus - CPU, Monitors, Mouse, Keyboards, Speakers.

Theory - CPU is also known as being of a computer every processing & function performed on computer are done by CPU

These are following parts below -

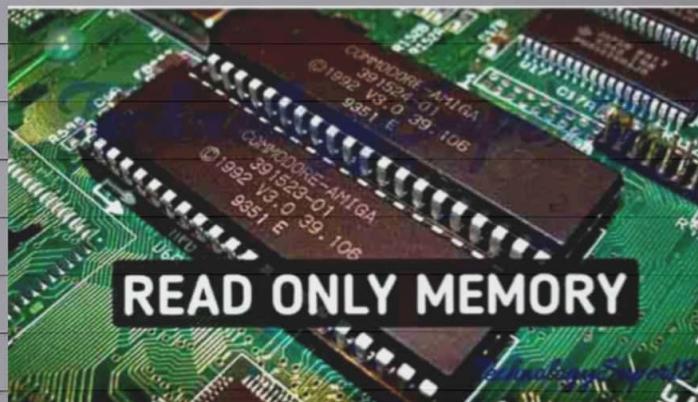

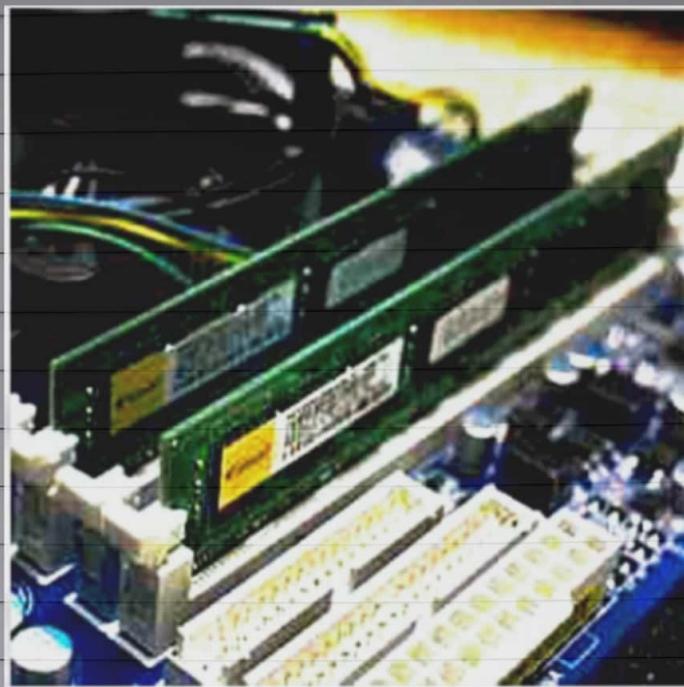

- a) Motherboard : It is the body through which other components integrate
- b) Microprocessor : It is operator of functions of CPU on a single chip integrated circuit of MOSFET construction.
- c) RAM : It is fast accessing when computer is slower.
- d) ROM : It is type of non-volatile memory used in computer
- e) Hard Disk Drive : It is type of storage which store digitally encoded data
- f) Power supply : It is source that supply power to all components of computer.

Q) Monitor :-

A computer monitor is a device that displays information or potential form. A monitor usually comprise the visual device display, circuit. Monitors are connected to the computer via digital visual interface or other properties connection & signal.

X Conclusion :-

Thus we have studied about all hardware that are mounted on CPU & also learnt their function.
